TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, Java, SQL
- **Backend:** Node.js, Express.js, Django, REST APIs, gRPC, BullMQ
- **Data & Messaging:** PostgreSQL, Redis, MongoDB, caching, background jobs
- **Frontend & Mobile:** React, Next.js, Angular, React Native, Expo, Zustand, React Query, RxJS
- **Cloud & DevOps:** AWS, Docker, CI/CD

PROFESSIONAL EXPERIENCE

Right Intellectual | Dubai

Software Engineer | | Nov 2023 – Present

- Built a Redis and BullMQ background job pipeline with retries, exponential backoff, and dead-letter handling to recover failed jobs and make processing failures observable.
- For real-time messaging, implemented a queue-backed service with connection pooling to handle concurrent connections without overloading backend resources.
- The LMS mobile application was rebuilt with React Native and Expo, using isolated Zustand stores and React Query caching to reduce redundant network requests by approximately 70% and improve reliability on unstable connections.
- To prevent duplicate scheduling operations, introduced TTL-based distributed locks and optimistic concurrency control, avoiding conflicting updates from concurrent requests.

Freelance Fullstack Developer | | Mar 2023 – Oct 2023

- A schema-driven form engine was developed to support more than 15 field types, separating form configuration, validation, rendering, and submission into a reusable processing model.
- After profiling React rendering behavior, isolated state updates and removed unnecessary component rerenders, particularly improving responsiveness on lower-powered devices.
- API request volume fell by approximately 35% after introducing debounced updates and local persistence, improving usability on intermittent mobile connections.

Software Developer Intern | MetaMorphoSys | India

Sep 2022 – Mar 2023

- Developed a product-configuration interface using Angular and RxJS, separating product rules from UI components to support complex configurations and future changes.
- Repeated API requests were reduced through client-side caching and selective data fetching, lowering unnecessary backend processing.
- Automated test coverage was expanded across critical UI workflows, helping identify regressions before release.

PROJECTS

Hexplot — Agentic AI Penetration Testing Platform

- Co-developed a self-hosted agentic AI penetration testing platform that scans web applications and infrastructure through white-box, grey-box, and black-box testing workflows.

Women's Safety Activity Detection System

- Trained and evaluated a logistic-regression activity-classification model, achieving approximately 97% accuracy on the project's held-out evaluation dataset.
- An end-to-end pipeline connected IoT sensor input with backend inference and real-time alert delivery.

EDUCATION

Bachelor of Technology in Information Technology

Rajagiri School of Engineering and Technology | 2018 – 2022

Primary–Secondary School

Our Own English High School, UAE | 2004 – 2017
